Additional information

XOut of the 36Million Kenyans, 43% are youth. This big percentage can not ALL be employed in both the public and private sector. They need resource mobilization which trickles down to where it's required most. African Governments should set aside some land for agriculture and mobilize enough resources in terms of equipments, fertilizers and housing. In addition to this, tree planting incentives can be incorporated. Quality of education should be scrutinized and improved to produce skilled workforce. Governments should also allocate more resources towards unleashing ICT potential and Supporting Small and Medium Scale Enterprises

Young people

Young people are busy generating their own income for growth and development. This results to increased resources which can be channeled to enhanced skills through training, better infrastructure, dealing with climate change. On overall this improves standards of living and skilled workforce
